Google Analytics

Offers Page — Events, KPIs & Funnels

Offers Page — User Journey Funnels

novibet

Offer Discovery Funnel

How players find the Offers Page

- Active Sessions
- Offers Page Reached
- Offer Section Viewed
- Offer Card Seen
- Offer Card Clicked

Offer Page Navigation Funnel

Behaviour once inside the page

- Page Opened
- Scrolled Past Fold
- Category Filtered/Tapped
- Offer Detail Opened
- CTA Button Reached

Offer Activation & Completion Funnel

Activation & return behaviour

- CTA Reached
- Offer Opted-In
- Bet / Action Placed
- Offer Completed
- Reward Claimed

💡 Drop-off between funnels reveals where to act: low Discovery → improve entry points & banners | low Navigation → fix page UX & filtering | low Completion → review reward relevance & reminder flows

Google Analytics — Events & KPIs to Track

novibet

✅ What Success Looks Like

A successful Offers Page drives a growing share of active players to discover and activate at least one promotion per session, increasing bet frequency and measurable GGR from offer-driven play.

Offer to Bet Ratio

Did activating an offer lead to a placed bet?

Revenue per Offer Visitor

GGR contribution of players who used Offers vs. those who did not

Offer Abandonment Rate

% of players who clicked but did not opt-in or complete

Repeat Visit Rate

Players returning to Offers Page in the same week

Category Heatmap CTR

Which offer categories attract the most clicks per impression?

Cross-product Activation

% of casino players who also activate sports offers (and vice versa)

Sportsbook Missions

Data Analysis — Mexico | Apr–Jun 2025 | 13 Weeks

Sportsbook Missions — 13-Week KPI Summary (Apr–Jun 2025)

novibet

181,540	64,823	35.7%	16.2%
Total Opt-Ins	Total Completions	Avg Completion Rate	Avg Opt-In / Active User

Sportsbook Missions — Conversion Rate & Customer Engagement

novibet

⚠ Pain Points Identified

June Completion Drop: Active users completing at least one mission dropped from 2,499 (May 18) to 1,234 (Jun 29) — a 51% decline — despite opt-in users remaining stable (~4,600–4,750).

Mission Volume: June saw only 5–6 missions per week vs. up to 14 in May. The end of the NBA season likely reduced mission supply and contributed to the engagement decline.

Sportsbook Missions — Mission Mix by Sport Category

novibet

Key Findings

- Football is the only sport present all 13 weeks — the backbone of the program.
- Basketball missions disappeared in June following the end of the season, despite being a strong engagement driver in April and May.
- Tennis partially filled the gap in June but not enough to sustain completion volume.
- Mixed missions peak (6 on May 18) coincides with the highest opt-in week (25,432), during the NBA playoffs when engagement is typically elevated.
- Zero Mixed missions in June — directly correlated with lowest completion users (1,234).

May 18: 14 missions (incl. 6 Mixed) → 25,432 opt-ins & 9,765 completions — best week across 13 periods

Sportsbook Missions — Success Definition & Product Recommendations

novibet

✅ What Success Looks Like

Missions succeed when ≥20% of weekly active users opt-in, completion rates stay above 35%, and engagement grows week-over-week with no widening gap between opt-in and completion users.

Maintain Mission Breadth

Keep ≥8 missions/week. Volume is the strongest lever for opt-ins and completions.

Re-introduce Mixed Missions

Mixed missions drove the peak week. Reintroduce them in June+ to re-engage multi-sport bettors.

Basketball Off-Season Plan

Basketball disappeared in June — introduce substitute sports or cross-sport missions during off-season.

Expand Private Missions

Only 0–5 private missions/week across 13 weeks. Increase personalized missions for high-value segments.

Diagnose Completion Drop

June completions fell 51%. While seasonality (end of NBA) likely played a role, mission difficulty, rewards, and time-to-complete should be reviewed.

Re-engage Non-Completers

Target opted-in players who did not complete with a push/email reminder at mission mid-point.

Should We Drop Missions?

novibet

🚫 No — Do Not Drop Missions.

Strong Absolute Scale

182K total opt-ins and 65K completions in 13 weeks. The product is actively used by a material share of the base across all three months.

Growing Opt-In User Base

Unique users opting in grew from 3,650 (Apr 6) to 4,754 (Jun 29) — a +30% increase — showing that the product is reaching more players over time.

Current Issues Appear Supply-Side Driven

The June completion drop directly tracks reduced mission volume and loss of sport variety. These are fixable supply-side decisions, not product design failures.

High-ROI Retention Mechanic

Missions reward regardless of win/loss — driving bet frequency and retention. Removing this would eliminate a key lever with no immediate substitute available.

Recommendation: Fix the supply-side (mission breadth, sport variety, private personalisation) before any discontinuation discussion.

03

Casino Loyalty Program

How to Frame the Analysis — Jan 2025 → Aug 2025

Casino Loyalty — Analytical Framework

novibet

Objective: Assess whether the Casino Loyalty Program (launched Jan 2025) is generating measurable value for players and the business by end of August 2025.

1. Time Period

- Full period: Jan 2025 → Aug 2025 (8 months)
- Phases: Launch (Jan–Feb), Growth (Mar–May), Maturity (Jun–Aug)
- Baseline: Oct–Dec 2024 (pre-launch, 3-month comparison)

2. Customer Segments

- Premium stage vs VIP stage players
- New players (first deposit 2025) vs returning
- High-frequency vs casual (by weekly session count)
- Coin accumulation percentile (P25/P50/P75/P90)

3. Core Metrics

- Coins earned & redeemed per player
- Milestone completion rate (Premium & VIP)
- % of eligible players progressing to VIP
- GGR per player: loyalty vs non-loyalty cohorts

Casino Loyalty — Illustrative Performance Dashboard (Jan–Aug 2025)

novibet

68%

Premium Stage Completion Rate

31%

Premium → VIP Progression Rate

+22%

GGR Uplift vs Non-Loyalty Cohort

4.7x

Avg Sessions/Month (VIP vs Non-Loyalty)

Casino Loyalty — Success Definition & Additional KPIs

novibet

✅ What Success Looks Like

The Loyalty Program succeeds when it drives measurable increases in session frequency, GGR, and player lifetime — and when a growing share of active players are reaching and sustaining VIP milestones month over month.

Time to First Milestone

How quickly do new players earn their first Premium reward?

Coin Redemption Rate

% of earned coins redeemed — low rate may signal awareness issues

Churn Rate by Stage

Do VIP players churn less than Premium only players?

Monthly Active VIP Players

Are VIP players returning each month to maintain their tier?

GGR Lift (Loyalty vs Control)

Matched cohort analysis: loyalty players vs similar non-loyalty players

Reward to Cost Ratio

Total bonus cost as % of GGR from loyalty players — ensures margin health

novibet

04

North Star Metric Framework

Product: Offers Page

North Star Metric — Offers Page

novibet

⭐ North Star Metric

Weekly Active Players with ≥1 Offer Activation

(# unique active users who click on and activate/opt-in to at least one offer in a given week)

Why This Metric?

- It directly measures value delivered — a player who activates an offer has received the core benefit.
- It captures both awareness (found the page) and intent (took action), not just passive traffic.
- It is actionable: product, marketing and CRM can each pull distinct levers to move it.
- Unlike page views, it filters out passive browsing — reflecting genuine, repeatable engagement.

Secondary Metrics

Offer Click Through Rate
Offer cards clicked ÷ offer cards viewed — measures discoverability

Offer to Bet Conversion
% of activations leading to a placed bet — links offers to revenue

Avg Offers Activated / Player
Depth of engagement: are players using more than one offer?

Revenue per Offer Visitor
GGR of offer visitors vs non-visitors — quantifies financial impact

NSM Framework — Guiding Product Decisions & Prioritisation

novibet

⭐ **Weekly Activating Users**

Awareness Driver	Engagement Driver	Conversion Driver
Entry Point CTR	**Offer Click Rate**	**Opt-In Rate**
A/B test Gift Icon placement; add offer banner on Casino & Sportsbook Home pages.	Improve card design; personalise offer order by player segment and past behaviour.	Reduce steps-to-activate; introduce 1-click opt-in for eligible, logged-in players.

How to Use in Practice

Review NSM weekly in team standups. If NSM is declining → identify which driver metric dropped first → prioritise the relevant initiative. Use secondary metrics to detect trade-offs (e.g., more offers shown but lower CTR may signal relevance issues rather than a volume problem).
