1. Google Analytics

Offers Page Analysis

1. Define what kind of events, kpis or funnels we can monitor, so we can extract valuable insights for the Product Team.

Key events

Conversion Events

- Click on the buttons to accept/play the offer (e.g., Register, Play, I want the offer)
- Redemption of the offers (Play, register, deposit, etc)

Engagement Events

- Click on offers banners
- Time spent on the offer page

Navigation Events

- Entry point (Gift Icon Botton, Push notifications, Banners, Ads, Affiliates)
- Click Menu (Todos, Sports, Casino)
- Scroll depth

KPIs

- Redemption rate
- Offer page impressions
- Click-through rate per offer
- Time on offers page
- Bounce rate

Funnels

- New user registration funnel (Welcome bonuses)
- Free games funnel
- Betting enhancement experience funnel

1. What success looks like for this product? Can you explain?

Awareness of the product

Have a high percentage of the active and new users landing on the offer page.

Engagement with the offer page

The users spend time exploring the page, interacting with the different offers and they return with frequency. Having a low bounce rate.

High Conversion Rate

Have a high and constant percentage of users redeeming the offers clicking through the CTA.

Financial Impact

Generation of revenue through the activities of the user that interacts with the offer page, having a positive ROI of the offers and increasing the CLV.

1. Are there additional KPIs that, combined with your suggestions above, enhance our decision making strategy?

- ROI of the offers
- CAC (Customer Acquisition Cost)
- ARPU (Average Revenue per User)
- CLV (Customer Lifetime Value)
- Active users after redemptions
- Complains received regarding the offer.
- NPS (Net Promoter Score)

2. Data Analysis & Product Insights
Sportsbook Missions

2. Missions – Sportsbook | Performance analysis Reports

Trimestral Report Missions

	April	May	June
Football	16	15	13
Basketball	9	13	0
Tennis	3	1	15
Mixed	0	14	0

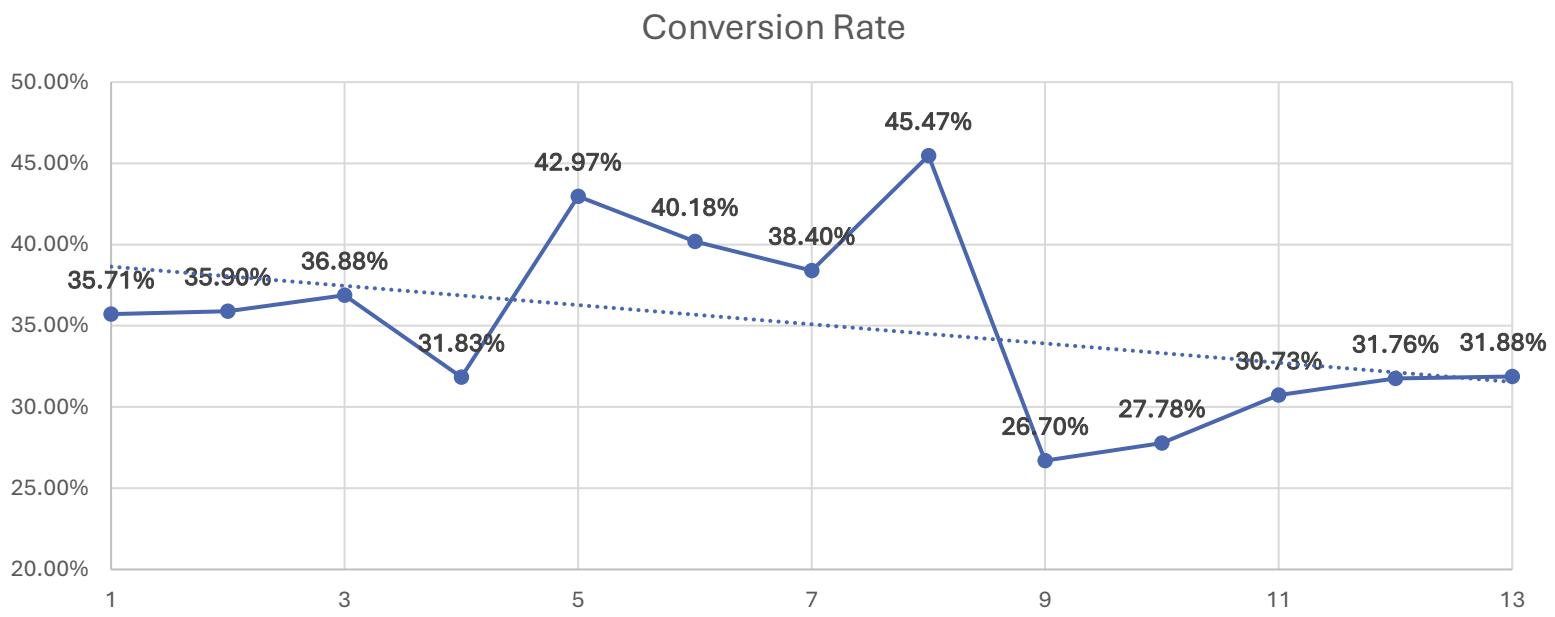
2. Missions – Sportsbook | Performance analysis Reports

Trimestral Report Missions

Monthly varation						
Month	Avg # Missions	Avg Public	Avg Private	Average AU	Avg AU at least 1 Opt In	Avg AU at least 1 Completion
May	53.6%	12.0%	400.0%	15.3%	17.3%	13.9%
June	-47.9%	-28.6%	-84.0%	0.01%	6.53%	-34.4%



AU Varation
19.17%

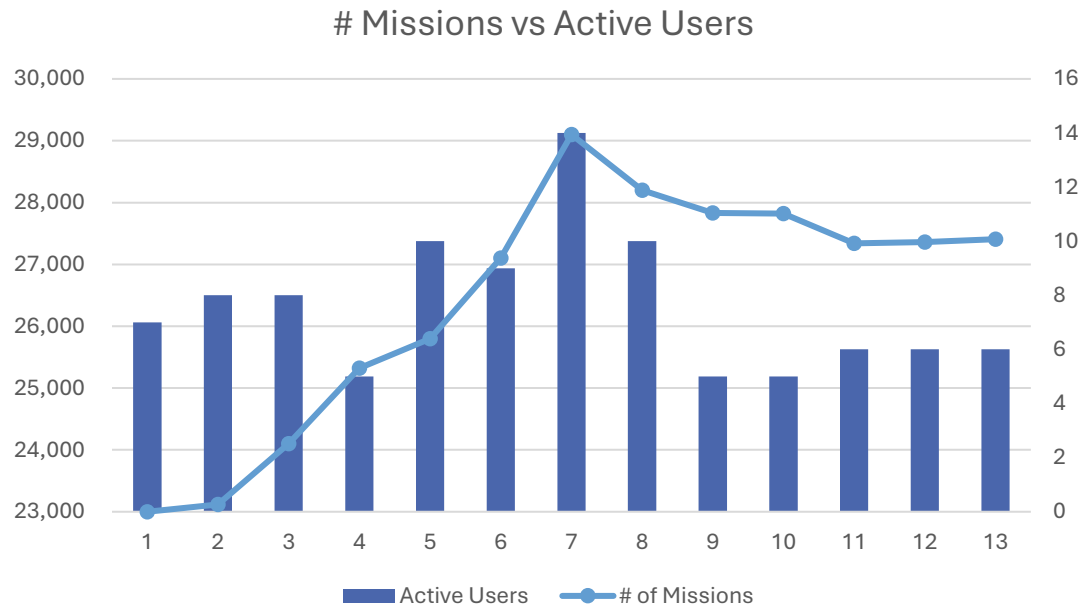
AU 1 Optin Varation
30.25%

AU 1 Completion Varation
-41.24%

2. How are Missions performing? Is there any pain point spotted from the data?

At the business level standpoint and based on the information available, we looked to understand the performance of the missions based on the growth in active users.

When comparing the average monthly variation in both missions offered and active users, we can see that when missions increased by 53% between April and May, the number of users also increased by 15%, and when the offer decreased by 48% between May and June, the growth in active users slowed down completely. This allows us to assume that the performance of the missions is having a positive effect on user activation.



Monthly avg varation		
Month	# Missions	Active Users
May	53.6%	15.3%
June	-47.9%	0.01%

2.

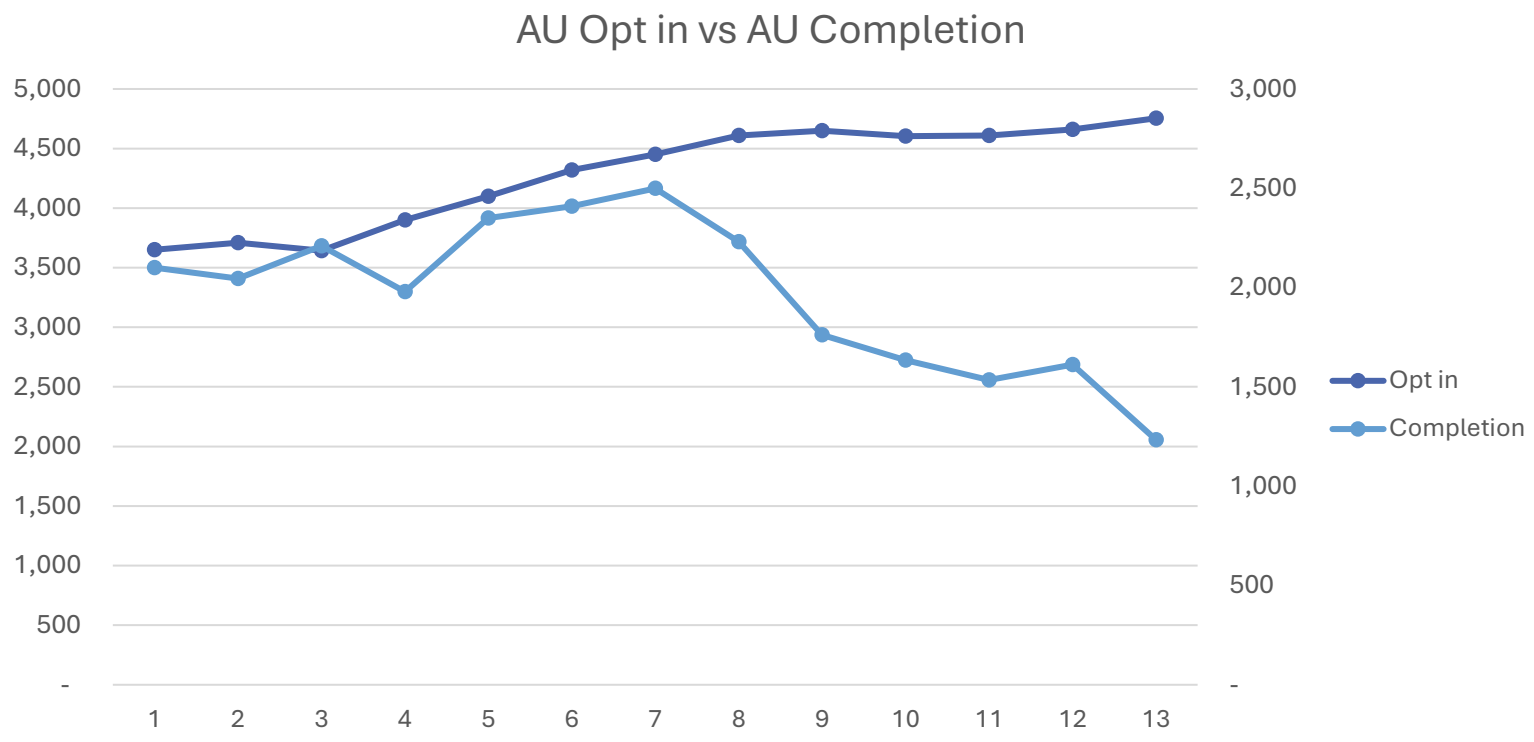
From a product perspective, it can be assumed that mission performance improves when private missions are offered and when there are mixed sports missions. This is because the weeks with the highest completion rates, between 38% and 45%, occur during weeks with missions of this type.

In order to confirm this, it will be necessary to have a breakdown of Opt-ins and Completion by segment (public and private) and category (sports).

# Week	Conversion Rate	% Public	% Private	Football Missions	Basketball Missions	Tennis Missions	Mixed Missions
1	35.71%	86%	14%	4	3	0	0
2	35.90%	88%	13%	5	3	0	0
3	36.88%	88%	13%	5	3	0	0
4	31.83%	100%	0%	2	0	3	0
5	42.97%	70%	30%	6	0	1	3
6	40.18%	67%	33%	3	3	0	3
7	38.40%	64%	36%	3	5	0	6
8	45.47%	60%	40%	3	5	0	2
9	26.70%	100%	0%	2	0	3	0
10	27.78%	100%	0%	2	0	3	0
11	30.73%	83%	17%	2	0	4	0
12	31.76%	83%	17%	3	0	3	0
13	31.88%	83%	17%	4	0	2	0

2.

A possible pain point was also found between opt-ins and completions, as the weekly variation trends are inverse. On the one hand, the product idea is appealing to users, as active users with at least one opt-in have been on the rise, with 30% growth in the last 13 weeks. but they are not managing to complete the missions, as completions have decreased by 41% and the trend is downward.



2. Provide additional KPIs that can be explored to enhance our decision making strategy

- Bet Frequency
- Average Revenue per User
- Customer Lifetime Value
- Growth of Active users vs Total Users
- Growth of Bets and Sales per sport

What success looks like? Can you explain?

Considering that the general idea of the product is to encourage players to place bets, I would see it as a relevant product for the business if:

It is generating a conversion from inactive to active users and increasing the frequency of user bets.

And at a product level would be that the number of users with at least one opt-in and at least one completion continue increasing, that the users would sign up on a recurring basis, and have a high completion rate each month.

2. Can you provide any product improvement based on your data?

If possible, the frequency of public and private missions, as well as the type of sports involved, should be standardized for at least a certain period of time in order to make a more accurate analysis of which characteristics of the missions are more relevant to have a good performance of the product.

On the other hand, it is necessary to identify at which point in the product's journey is occurring the biggest drop-off of users, causing them not to complete the missions. This is in order to understand whether it is due to the UX, communication, complexity of the rules, or another situation.

2. If you were responsible to consult the product team for next steps, what would you say?
How would you respond if you were asked to drop the Missions product?

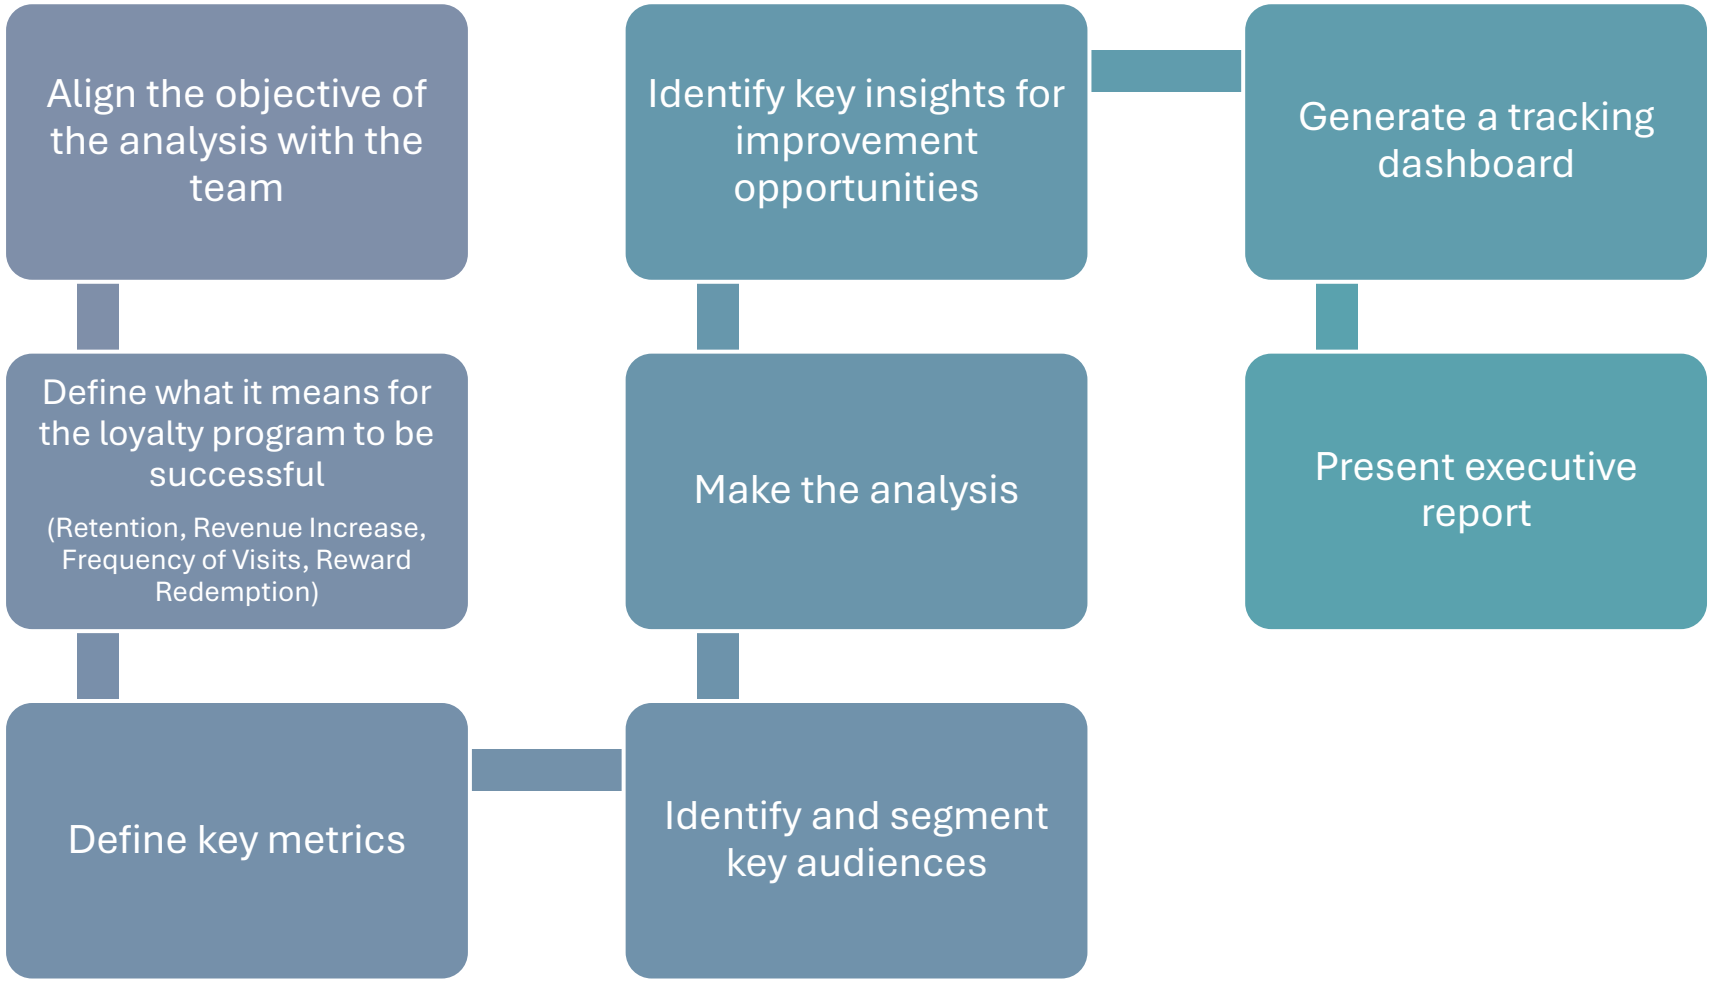
It seems like the product is attractive to our customer and relevant to the business because it’s helping to increase the active users. Therefore, I would suggest to look for improvements for the product regarding the personalization of the missions, so it continues improving their performance increasing the number of opt-ins and the conversion rate.

Since removing the product would not be positive for the platform's performance, I would ask to understand what is causing to take this decision so I can see if there is any analysis and/or insight from my part that could contribute to change this action.

If the decision is final, I would suggest for the removal to be gradual, to try not to generate so much discontent among users who are very active with the product, and also to take in consideration the idea of creating or enabling a product that could replace it.

3. How to?
Casino Loyalty program analysis

3. How would you frame the analysis?



2. Explain the perimeter of your analysis e.g. time period, customer segment, etc

Data

- Time period: Ideally at least 30 months of historical data to compare progression YoY and MoM
- Channels: Web and App
- Customer by Games: Slots, Casinos and Live Casino
- Customer by Demographics: Age, Gender, City/State
- Customer by Stage: Premium and VIP
- Platform Use: Sessions, Time expended, Bankroll
- Program use: Points, Milestones and Redemptions

Metrics

- CLV
- Money Bet per customer
- # of Games played per customer
- Play time per customer
- Sessions per customer
- ARPU
- Program cost as % of NGR
- Milestones Progression
- % of Redemptions
- Churn Rate per Stage and Milestone

4. North Star Metric Framework

4. Propose a NSM for one of the above mentioned products (Offers Page, Sportsbook Missions, Casino Loyalty)

Product: Casino Loyalty Programm
NSM: **Number of rewards redeemed per week**
Rationale: Given that NSM seeks to be a metric that reflects the value the product gives to the user, the growth of the product, and the business goals, I began by defining each of these.

- Main user problem: They will not always win, and this could discourage them from continuing playing.
- Value that the product delivers to the user: Give value to all plays/bets made within the Casino, making the customer feel that they always win regardless of the outcome.
- Product growth: Users reach the different milestones of the Premium program and then those of the VIP program and redeem their prizes along the way.
- Business goals: Increase the number of plays/bets per user during the time they use the platform.

From there, I listed the key factors present in the loyalty program, which were: Plays/Bets, points, milestones, prizes, and stages.

With all this in mind, I looked for the metric that best reflected both the value the product gives to the user and the business goals, coming to the conclusion that the number of rewards redeemed, as it directly reflects the value the customer obtains by being part of the program and, at the same time, allows the company to understand its use and growth. All this understanding that the more prizes are redeemed, the more plays/bets have been entered, generating more sales to the business. One part of the NSM that would need to be discuss and test will be the timeframe of it, I will consider a weekly one to start the metric.

4. Identify 3-4 additional, secondary metrics that can either influence the NSM or cover another dimension of success for the product

- Percentage of Premium and VIP players
- Number of milestones achieved
- CLV

Describe the way you can actually use this NSM framework to guide product decisions and prioritize initiatives.

By understanding how redeemed rewards behave, you can tell whether the loyalty program is working or not, which will give clarity to all the areas to define their tactics and KPIs that will add value to the goal.

Later, when there are different tasks to be performed, they must understand the relationship that each of these has with the NSM and assess which ones should be prioritized. For example, if you are considering modifying the program rules, you should always keep in mind how these changes would affect the redemption of rewards, seeking to ensure that these impacts are positive. Another example would be when considering send some communication to the users about their status within the program, It would be important to mention the rewards like which are the rewards, how to redeem them, how many points they are missing to earn certain reward, etc.

Number of rewards redeemed per week

Approach, assumptions, and areas for further exploration

In order to carry out the tasks of this assessment, I sought first of all to understand as best as possible how the product worked, then analyze which was the value that the product intended to give to the customer, and finally how that value was linked to the business goals, assuming that the main goal for the products was to generate revenue for the company.

From my point of view, the three products have positive characteristics that can allow them to deliver value to the platform and with constant monitoring of KPIs, could be improved when the customer and/or market evolve.

Equally, I would believe that the different areas within the company would be involved in this tracking in one way or another, as I consider that in order to achieve the best possible performance for this type of product, the ideas and needs of all areas that may at some point be involved in the life cycles of these products are required.

On my side, as further exploration, in terms of analysis, it is clear for me that I would look to obtain more data to feed the performance analysis of these products and, if possible, generate some reports that would be updated automatically.

In terms of the product, it would be very interesting to consider how the casino and sports betting sections could coexist in a product of this type (missions or loyalty programs). And on the business side, I would seek to understand the financial aspects of the products, like costs or ROI, in order to link product performance with the business goals.
