Home Assignment: Product Manager

Question 1.- Google Analytics

Define what kind of events, kpis or funnels we can monitor, so we can extract valuable insights for the Product Team.

What to monitor (events/KPIs/funnel): Track entry points (Gift icon, banners), engagement (time on page, scroll depth, section clicks, search/filter usage), and the core funnel: **Offers Page view → Offer click → Offer activation → Game start**.
What success looks like: Users can **find the page easily**, explore multiple offers, and move through the funnel with **low drop-off**, generating repeat visits and post-offer play.
Additional KPIs to improve decisions: "Time to activation" and "steps to activation" (friction), offer contribution (top offers driving activations), retention uplift (offer users vs non-offer users), and segmentation by platform/region/user type to guide targeting and placement.

Question 2.- Data Analysis & Product Insights

Now, from a more product point of view, we want to evaluate how Sportsbook Missions, one of our most
Reports / insights: Conversion peaks in **May (~41%)**, drops in **June (~30%)**, with a clear step-change after **May 25**. Performance is stronger when **mission volume is higher** and **Private missions are a meaningful share**; June shows fewer missions and reduced Private mix, while opt-ins remain solid—suggesting **completion-stage friction** (not discovery).
Pain points: Growing opt-ins but declining completion efficiency; widening gap between opt-in and completion indicates increased difficulty, complexity, or weaker relevance.
Additional KPIs: Completion time, drop-off by step, completion by mission type/category, reward cost vs incremental engagement, and cohort retention for mission participants.
Improvements / next steps: Restore a **balanced Public/Private mix (targeted Private)**, increase weekly variety, simplify completion requirements, improve progress clarity, and run A/B tests on thresholds and mission mix.
If asked to drop Missions: Recommend **not dropping**; the mechanic proves strong when configured well (May peak). Treat June as a fixable execution/config issue and iterate before removing a high-engagement lever.

Question 3.- How to?

How to frame analysis: Adoption → progression (Premium→VIP) → redemption behavior → retention impact.
Perimeter: Jan–Aug 2025; active casino users only; segments: new vs existing, Premium completers vs non-completers, VIP vs non-VIP; exclude competitive comparisons and over-focus on coin numerics.
Visuals: Progression funnel (active→earners→Premium→VIP), monthly trends, milestone distribution, retention curve loyalty vs non-loyalty.

Question 4.- North Star Metric Framework

NSM: Monthly Active Casino Loyalty Users (players earning coins at least once per month).
Rationale: Captures sustained, value-creating engagement in a frictionless, activity-driven program and aligns with Premium→VIP retention design.
Secondary metrics (3–4): Premium completion rate, VIP monthly active users, avg coins per active user, retention lift vs non-loyalty users.
How to use it: Prioritize initiatives by expected NSM lift; diagnose drops via secondary metrics (e.g., low Premium completion → simplify milestones; flat VIP → improve VIP rewards/communication).
